## **American Telesis announces a Revolutionary IP Turret**

American Telesis (AT) is a facilities based carrier providing Private Lines throughout the U.S. and Canada. For more than fifteen years, AT has supported telecom-intensive environments with robust network connectivity comprised of T-1s, T-3s, ARDs, Hoot'n'Hollers, Ethernet and now a complete suite of IP products to handle all your voice and data needs.

This year American Telesis is announcing a revolutionary IP turret. Finally, your trading floor and backoffice personnel can be merged onto one platform. Using the powerful Cisco product line, American Telesis delivers the first true IP turret, decreasing the number of products, vendors and costs associated with running a trading floor environment. Additionally, the IP nature of AT turrets simplifies your Disaster Recovery plan and increases the productivity of your mobile users, all at a lower cost of ownership than any product available on the market today.

Stop by booth #3616 to try the beta version of American Telesis Trading Turrets.
